HOMES ARE SUPPOSED TO EXPRESS INDIVIDUALITY. NOW THE TECHNOLOGY IS HERE TO MAKE THIS A REALITY.

A WORD FROM THE C.E.O

Dear colleagues,

Prefabricated off-site construction has always been the holy grail of the construction industry. Today, it's no longer a dream, but rather a necessity. In most advanced and developing areas of the world, traditional on-site construction is often too expensive, too inefficient, and too labour intensive to satisfy the growing demand for affordable energy-efficient residential housing.

At NP5 Group, we are proud to be at the forefront of light gauge steel framing technologies. After years of innovating, experimenting and working alongside scientists, our state-of-the-art prefabricated light steel frame homes will hit the market in the first quarter of 2020. As we are getting ready for the launch, we put this catalogue together to introduce our partners and other interested parties (real estate developers, architects, construction companies, realtors and, of course, the end-customers) to our innovation that promises to be a real game-changer in home building.

Future Homes from Light Steel Structures / Pages 6-7

In the first article, you will find some introductory information about our light gauge steel framing technology, as well as our convertible profile frame and truss component manufacturing machine. With the help of these technologies, we can produce prefabricated houses that offer multiple benefits including lower price for end-customers, energy efficiency for northern regions, environmental sustainability, extreme durability, outstanding exterior and interior design, and, of course, a much quicker construction time.

Buy a House Like You Buy a Car / Pages 8-19

When we want a new car, we choose the brand and model that we like, and we buy it. We want people to buy houses the same way. The modern consumer doesn't have the time, nor the patience, for a time-demanding processes that are service-based architecture and on-site building. Consumers are accustomed to ready-made products and brands that are emotionally satisfying. That is why we divided our light steel

frame house models into six categories based on façade geometry. Each type is individually branded so that end-customers can discover the living experience that they seek. Having chosen the house brand, the end-customer will also have multiple customization options (just like your favourite car model can be further customized to reflect your individual preferences).

NP5 – A GROUP OF COMPANIES BEHIND THE INNOVATION

Before we go into a deep overview of NP5 light steel frame technologies and the resulting house models and brands, let me say a few words about the organization that is behind all this. NP5 is a group of companies operating in Lithuania, and the Netherlands. The group consists of five member companies: "NP5 Constructions", "NP5 Projects", "NP5 House", "NP5 Technology", and "NP5 Innovation".

The origins of the group go back to 2008 when a team of young and ambitious architects formed the architectural company NPS projektai Ltd in Šiauliai, Lithuania. Soon after a second company was founded, a construction-focused enterprise NPS statyba Ltd. In 2018, the companies underwent a comprehensive restructuring process. To match the growing international scope of activities, NP5 group was established. Today the group consists of five different companies.

"NP5 Projects" and "NP5 Constructions" are mainly involved in satisfying the local demand for state-of-the-art housing and commercial buildings. The other three companies are focused on the export markets (and on ushering a new era of home production). "NP5 Technology" is a manufacturing company that relentlessly invests

in new productive technologies including the most innovative automatic steel building machines from New Zealand. “NP5 Innovation” focuses on the intelligent house management systems (one of the prioritized areas is home innovations for children with disabilities). If the former two companies are inward looking, “NP5 House” is the international face of the group: the company is focused on developing new light steel frame houses models and brands, as well as promoting and selling them across the globe (especially the Northern regions where energy-efficient residential houses are in high-demand).

What unites all the members of the group is an underlying ambition to challenge archaic traditions in the fields of architecture and construction where clients and customers must suffer through the tiresome, expensive, and time-consuming service-based execution of projects. Working under a paradigm of no-nonsense housing, NP5 tries to be at the forefront of the product-based revolution in the building sector. The essence of the product-based model lies in eliminating client uncertainties. Architectural projects and construction solutions are packaged, purchased, and built as ready-made made products.

I hope you will enjoy reading this catalogue. Our ambition is a bold one. We are re-architecting the construction industry. If you want to get on board, we are already accepting pre-orders for the first houses that would be delivered to you in September-October 2020. If you have any questions about our prefabricated light steel frame homes, we are always open for correspondence at info@np5.eu.

Renaldas Marcišauskas
C.E.O.

LGSF RESIDENTIAL HOMES: THE TECHNOLOGY AND ITS BENEFITS

Light gauge steel framing (LGSF) is not a new technology. It's been around for quite a while now. What's new is its application in the production of ready-to-live-in residential homes (and ready-to-live-in means what it says: the houses come with finishing, engineering networks, and even furniture). The key word here is production which has the power to transform the way prospective homeowners experience house buying. Instead of purchasing the lengthy services of custom architecture and on-site construction, end-customers can now buy pre-produced houses that take less than a week to assemble on-site.

The production of pre-fabricated houses has also been around for quite some time. However, prefabs have traditionally been produced from wooden materials. "Compared to wooden frames, steel frames offer innumerable advantages," explains Renaldas Marcišauskas, the CEO at NP5 Group, "for one thing, light gauge steel structures preserve their geometric characteristics over time which allows to create a truly hermetic building that retains its energy-efficiency throughout the years."

RE-ARCHITECTING THE HOUSING INDUSTRY

While there are plenty of companies that offer separate light steel frame products for the construction industry, NP5 is one of the few companies worldwide that employ the technology (powered by state-of-the-art machinery from Howick) to manufacture ready-to-live-in houses.

As you can see, all the house models feature impressive and ultra-modern looking exteriors. These are achieved by using thermal sandwich energy efficient precast wall panels and adding unique facades (such as Kebony wood, concrete imitation, classic tinplate or Corten steel, wood composite board) on top. All house models feature innovative noise-isolation features, and excellent energy-efficiency levels (A, A+, A++) rendering the houses suitable for the Nordic regions of the world.

"We are currently working on a number of innovations and patents," says Mr. Marcišauskas, "One of them has to do with an intelligent house management system, but I don't want to say too much until we get the patent for it." Depending on end-customer preference, ready-to-live-in houses may also include a variety of add-ons, while other features will be present in all models (such as kitchen equipment, heating equipment, air conditioning systems, solar power panels, etc.)

Compared to traditional modular residential homes, light steel frame homes offer a much greater architectural freedom. Instead of playing Lego with a small set of bricks, we offer clients and customers to pick the house produced in the image of their core desires and fantasies.

ENVIRONMENT-FRIENDLY HOMES

Not only does the new technology offer affordable housing, it also represents a way to reduce the construction industry's negative footprint on the environment. Depending on different estimations, the construction industry is responsible for up to 50 % of landfill waste, and up to 40 % of energy usage globally. The industry as a whole plays an enormous negative role in climate change.

"The production of light steel frames is an environment-friendly process that does not exploit natural resources, and offers productive outcomes that are fully recyclable," explains Mr. Marcišauskas, "what's more, our production process leaves little-to-zero waste."

In an environmental sense, LGSF houses offer a markedly superior option to both wooden and SIP panel prefabricated houses which are notorious for inefficient and environmentally unsound use of natural resources.

B2B PARTNERSHIPS

At the moment, we are getting partners on board who wish to distribute (and/or assemble) our ready-to-live-in light steel frame houses in their respective markets. Because LGSF technology allows us to produce houses on a mass scale, the cost per unit can be significantly lower compared to traditional on-site construction.

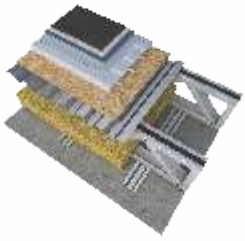

At the same time, LGSF houses can compete against the best residential houses in terms of energy efficiency, functionality, durability, and modern aesthetic excellence. What this means for our B2B partners worldwide is enormous profitability potential. Also worth mentioning is the fact that, with LGSF houses, you will be able to target both residential and touristic real estate market segments.

For more information on NP5 LGSF technology, please visit our website, or contact us at info@NP5.eu

WHAT IS THE 5 IN NP5?

Complaining about newly bought houses or apartments is one of humanity's favourite pastimes. And while some of the complaints can be written down to innate human tendency to grumble, a lot of the blame also rests with architects and builders. The key mistake is not thinking in advance about all the five senses of the human body.

At NP5, we are committed to double-checking every aspect of our ready-to-live-in houses in relation to the five human senses. Every building must not only be satisfying to the human eye, but also please all the other senses: hearing, smell, touch, and even taste. Thinking in advance about pleasing all the five senses helps NP5 create houses for inspired stress-free living.

Where You Live is Who You Are

Homes are supposed to express individuality. Now, the technology is here to make this a reality. We took a cube – the most basic 3D geometric shape – and applied pressure forces to it to create unique house shapes that resemble the shapes of human life. As we learn from philosophers, physicists, and mystics, there are connections everywhere. Abstract geometric shapes are mirrored in both natural and man-made objects. These objects have always fascinated the human mind, and have led us to creating houses that re-embody the abstract geometric shapes in new architectural expressions. This process has also been filtered through the unique perceptive mechanisms of different human psyche archetypes. Because, after all, there are different levels of priority that we give to values like freedom, love, vision, tradition, heroism, and self-expression. Our homes should reflect our core desires.

THE WILD WAVE

Because Regular Living Is Not Your Cup of Tea

The irregular geometric shape of the Wild Wave house represents a cube transformed by internal side pressure. The resulting transformation resembles a crashing wave that washes away all your worries and cares.

The Wild Wave is a house for the ones who value freedom above anything else. Whether you are single or raising a freedom-loving family with your loved one, you refuse to be a part of the rat race. Because regular forms and regular life styles are not your cup of tea. You are the explorer. You are the seeker. You are the wonderer. And you would take off your suit and tie in a heartbeat in exchange for the liberating pleasures of playing in the crashing waves.

Everybody loves freedom. The Wild Wave house is for the few who actually live it.

The Wild Wave comes in a rich and customizable variety of models that includes 50m^2, 80m^2, 110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, The Wild Wave can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

THE JEWELRY BOX

Because Your Family Is the Most Precious Jewel

Cubes and cuboids are almost impossible to find in nature. One of the few exceptions is diamonds that are sometimes discovered in near-perfect cubic shapes. It may well be that, because this geometric form is so rare, the human mind finds it to be so precious and sacred.

The Jewelry Box house is for the loving caregivers whose core desire is to love and protect their most precious jewels: their family and loved ones. The Jewelry Box house features a unique synthesis of rigid conservative forms and modern appeal. This synthesis reflects the most purposeful undertaking of all, the disciplined building of a happy and prosperous family.

The Jewelry Box is where traditional family life takes on new inspirational forms.

The Jewelry Box comes in a rich and customizable variety of models that includes 50m^2, 80m^2, 110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, The Jewelry Box can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

THE MOUNTAIN SLOPE

Because Heroes Must Always Reach the Top

The geometric shape of the Mountain Slope house represents a cube transformed by internal diagonal pressures. The key feature of this house is a single slope roof (also known as a skillion roof or mono-pitched roof) which reminds one of a hero's journey up the mountain slope.

Skillion roofs offer a minimalist yet elegant appeal, and are the staple of modern design. This roofing style renders the inside spaces open and airy, as well as allowing in lots of natural lighting. The Mountain Slope is a house for the ambitious ones, for people who value willpower and courage above anything else. If you are the kind of person who can defeat any uphill challenge, you will find the Mountain Slope's geometric forms to be reflective of your inner self.

The Mountain Slope house is not for everyone, only for real-life warriors and winners.

The Mountain Slope comes in a rich and customizable variety of models that includes 50m^2, 80m^2, 110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, The Mountain Slope can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

THE SWEET CUPCAKE

Because Dreamers Will Always Have a Happy Heart

The traditional geometric shape of the Sweet Cupcake house represents a cube transformed by internal upward pressure. The resulting old-school double-sided roof shape embodies the sweet innocence of traditional house living.

The Sweet Cupcake is a modern interpretation of the traditional house with a double-pitched roof. While featuring innovative design and incredibly large windows, the Sweet Cupcake retains a nostalgic feel of traditional living which is so hard to preserve these days. This concept finds an audience among people who refuse to give up on their innocence even if the world around them is getting lost. The Sweet Cupcake will help you embrace who you are: the inspirational dreamer, the romantic, the traditionalist.

The Sweet Cupcake is where the good old life is still alive

The Sweet Cupcake comes in a rich and customizable variety of models that includes 50m^2, 80m^2, 110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, The Sweet Cupcake can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

THE MORNING GLORY

Because Life Is the Ultimate Form of Art

The extravagant geometric shape of the Morning Glory house represents a cube transformed by three inward pressures that go up and diagonally to both sides. The resulting pentagonal shape bears a slight resemblance to the blossom of the Morning Glory flower.

Standard, traditional and normal may be great for most people. But they are the greatest enemies of those who have art living inside them. The Morning Glory house is for creative people who dare to challenge the conventional ways. You are the free spirts, the flower people, the inventors of new worlds. And it's only natural that you wish to surround yourself with objects and spaces that inspire original moods and ideas. The Morning Glory house was conceived with exactly this purpose in mind.

The Morning Glory is a house for artistic living outside the mediocrity box.

The Morning Glory comes in a rich and customizable variety of models that includes 50m^2, 80m^2,110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, The Morning Glory can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

THE SUNBEAM SPECTACLE

Because You See What Others Don't

The tradition-bending shapes of the Sunbeam Spectacle house represent the cube transformed by a multitude of multi-directional physical forces. The outstanding feature of this model is its faceted roof with a single top point from which three ridges go down diagonally to create a true aesthetic spectacle. The design concept draws inspiration from the sun and its magical beams.

The Sunbeam Spectacle house was designed for visionary individuals who have the power to see hidden meanings and opportunities. You are the modern-day magicians who go through life making the impossible possible. You don't believe that hard, exhausting work is the only key to success. Because why tire yourself if you have vision, charisma, and magic on your side? The Sunbeam Spectacle house mirrors, and expresses this magical philosophy.

The Sunbeam Spectacle is a house for magicians who don't need others to understand them.

The Sunbeam Spectacle comes in a rich and customizable variety of models that includes 50m^2, 80m^2, 110m^2, 140m^2 living space options. One floor and two floor (loft type) options are available. And just like the rest of NP5 houses, the Sunbeam Spectacle can be purchased with a variety of different finishing types and levels. You can buy the house that's ready to live in (even furniture included), or you can add your personal twist by doing the finishing yourself.

MEET THE TEAM LEADERS

Np5 is run by a team of young and ambitious architects, engineers and innovators. While in ten years the company has grown from a local to an international player, the core of the team has remained unchanged. The leaders of the company are highly-qualified experts who seek to revolutionize the construction industry. Each of them is obsessed with his or her respective line of work, setting a positive example for the growing number of NP5 employees. Motivation has never been an issue at our company, because we don't wake up just to go to work. We wake up every morning determined to change the world.
